

# Defensys SGRC

Automation of cybersecurity management,  
risk analysis and compliance procedures

**Defensys**

## Key Features Defensys SGRC

### Asset and Vulnerability Management

Defensys SGRC provides powerful tools to perform a full set of cybersecurity governance:

- ✓ IT asset management with the unique technology of merging data from multiple sources.
- ✓ Vulnerability control.
- ✓ Development of company's cybersecurity guidelines.
- ✓ Strategic planning.

### Risk Management

Defensys SGRC includes a solution for automating direct and indirect cyber risks assessment management using the following assessment methods:

- ✓ ISO 27005
- ✓ FAIR
- ✓ Defensys Risk Assessment Methodology

You can also build your own risk assessment method using System's settings and without programming.

### Compliance Control

- ✓ Simplifies the control process of your infrastructure and cybersecurity system for compliance with a lot of pre-built standards, as well as other official requirements (e.g. ISO 27001, NIST etc).
- ✓ Internal audit builder for configuring the assessment process.
- ✓ Compliance audit results in reporting documents.
- ✓ Calculating and monitoring compliance index.
- ✓ Compliance issues report and correction plan.

### Data visualization and report generation

Based on collected data, Defensys SGRC builds dashboards, diagrams and charts. The dashboard builder with predefined templates allows you to generate visual datasets up to your needs.

## Defensys SGRC Advantages

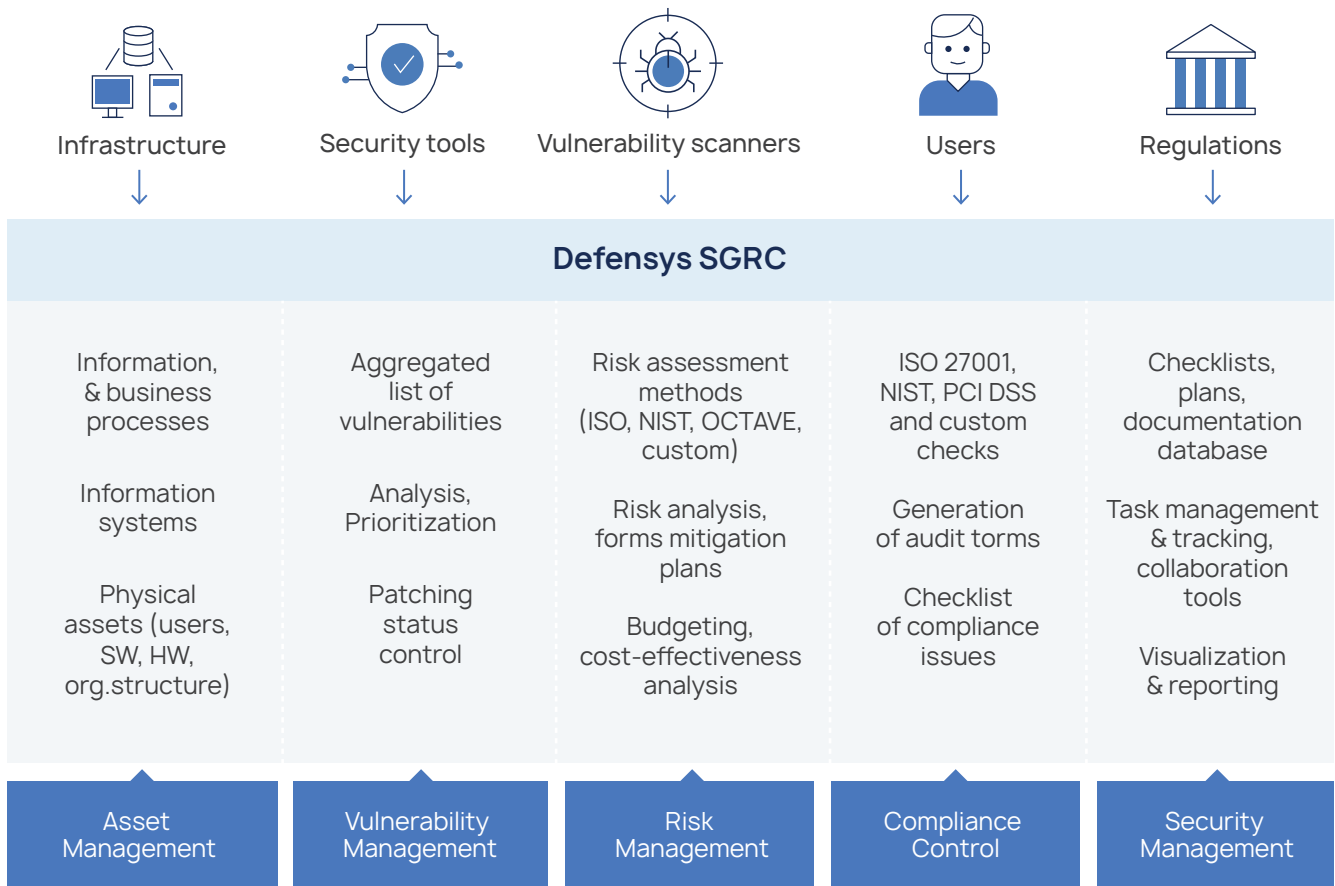

- ✓ Flexible setup according to your company's profile and tasks.
- ✓ Vertically and horizontally scalable architecture.
- ✓ Support of user-defined standards and methodologies.
- ✓ Large set of predefined standards, threat feeds, security measures, and reporting types.

**Defensys SGRC** delivers effective cybersecurity management to your company, ensuring timely risk detection, building internal regulatory documentation, and facilitating control over compliance with external requirements.

Defensys SGRC automatically calculates metrics, allowing you to clearly control various processes and make comprehensive decisions on the company's cybersecurity development.

Defensys SGRC is a single workplace for cybersecurity professionals to collaborate, plan and monitor tasks, and manage business processes.

### Centralized security management

### Implementation results Defensys SGRC

- Timely assessment of cybersecurity risks, cybersecurity threats likelihood and possible damage.
- Identifying potential intruders.
- Selecting optimal security measures based on risk assessments, current cybersecurity state analysis and available budget management.
- Visualization and transparent information delivery on a current cybersecurity state.
- Automatic reports generation for both internal needs and regulators.
- Automated analysis of compliance with regulatory requirements.

## About Defensys

Defensys is an award-bearing and nationally acknowledged vendor of cybersecurity solutions. Since 2011, we have been fostering government agencies and private-sector companies to confidently withstand modern cyber threats and ensure reliable security management worldwide.

Defensys technologies are embedded in financial, public, oil and gas, energy, metal industry, and other sectors.
