

Defensys

Asset Control Platform (ACP)

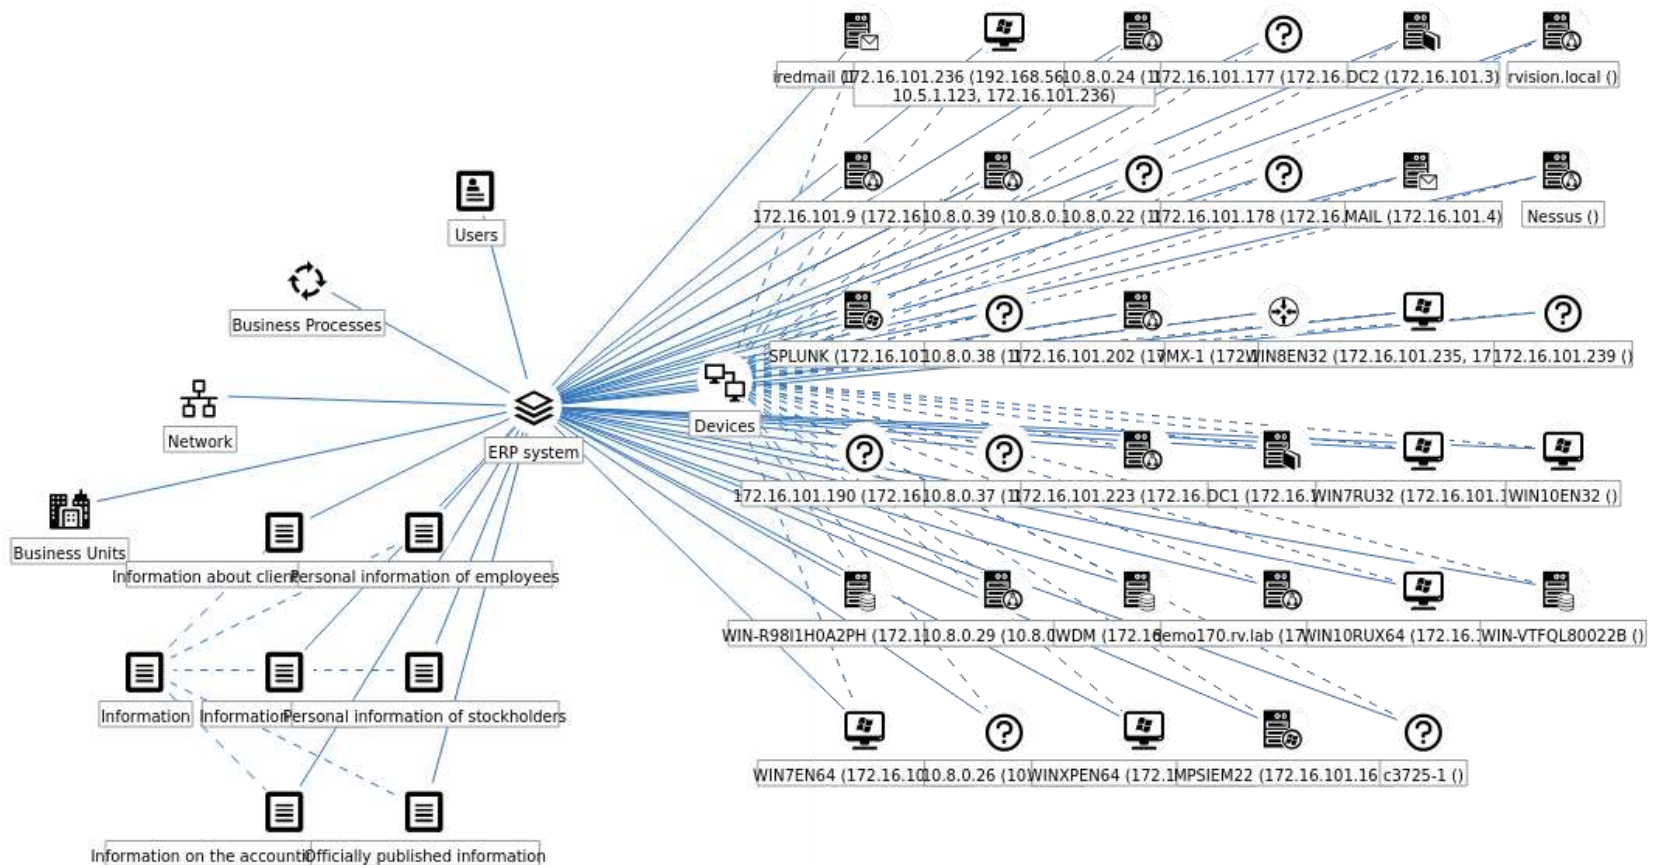

Defensys Ecosystem

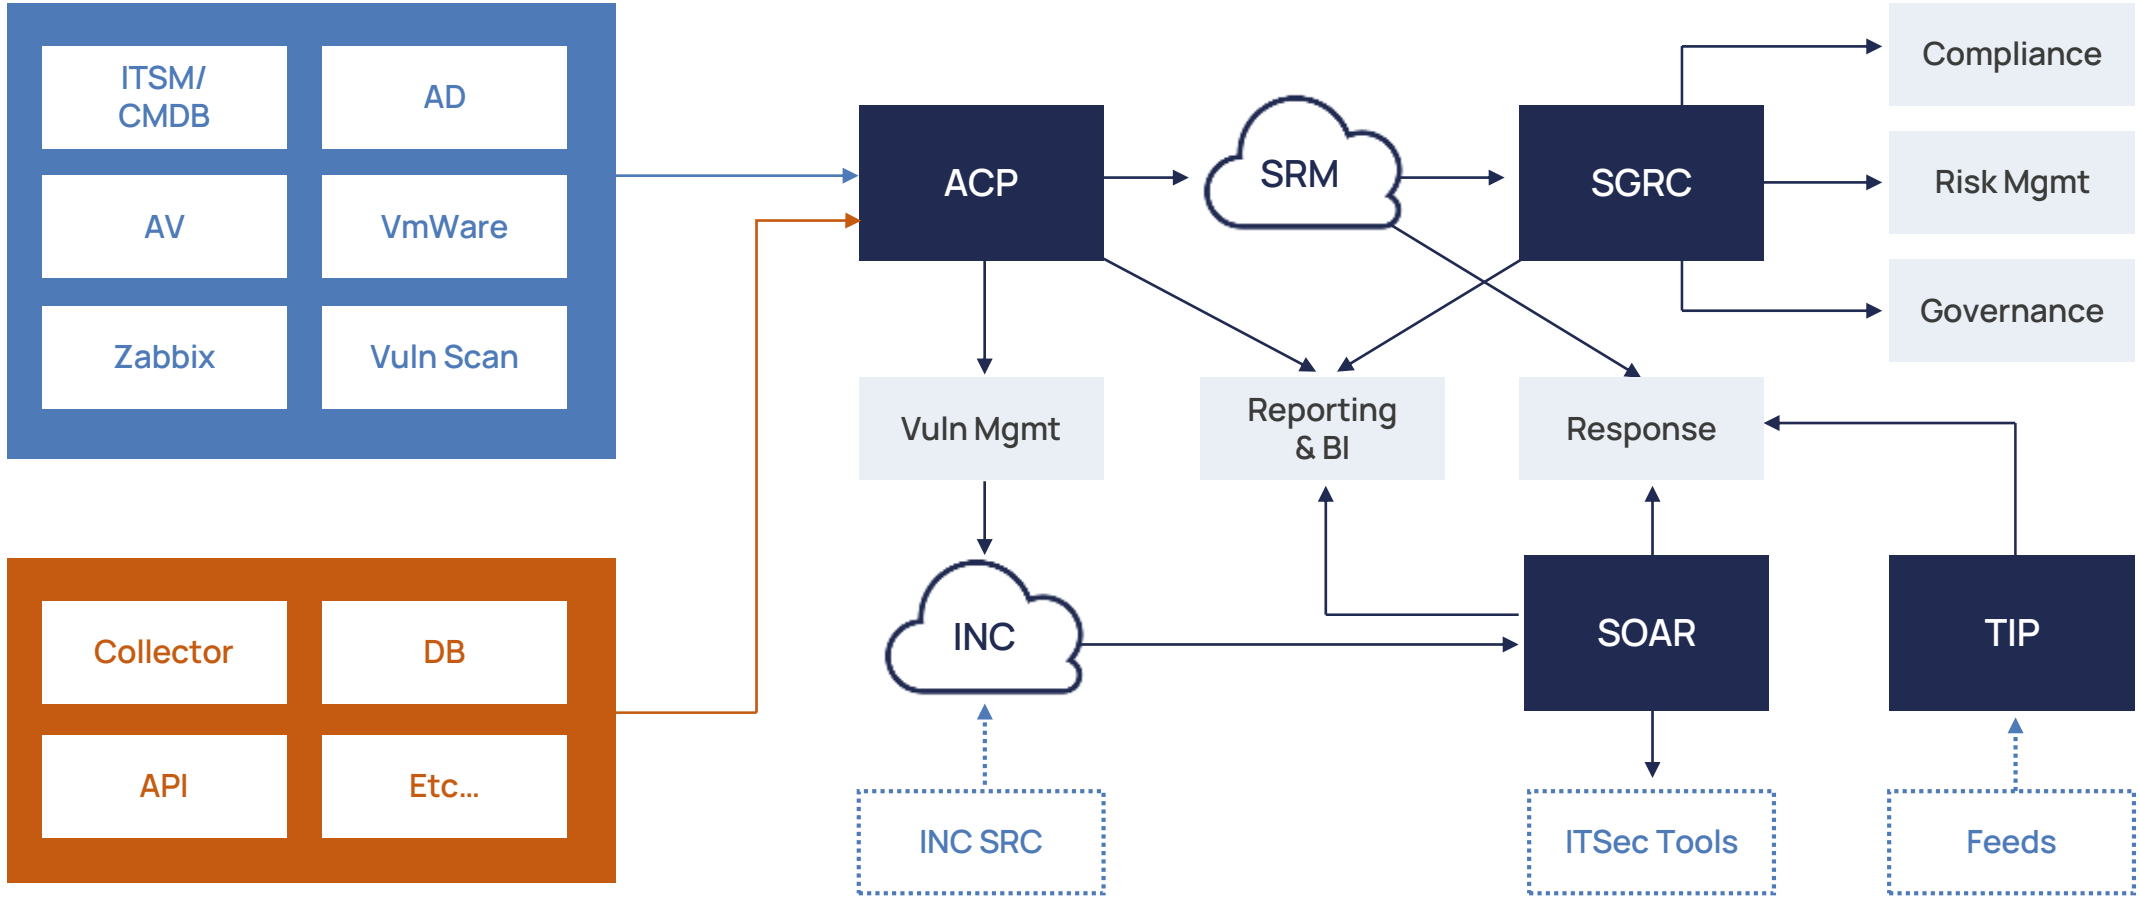

Recommendations

To work effectively, a specialist needs to answer the question, "What are we protecting?" in as much detail as possible. In other words, it is necessary to gather as much information as possible about the assets and build a accurate resource and service model of the enterprise.

ACP in a SOC and its role

Implementation

The following asset categories are represented in Defensys ACP:

Devices

Facilities

Software

Business units

Network

Information

Users

Business processes

Domains

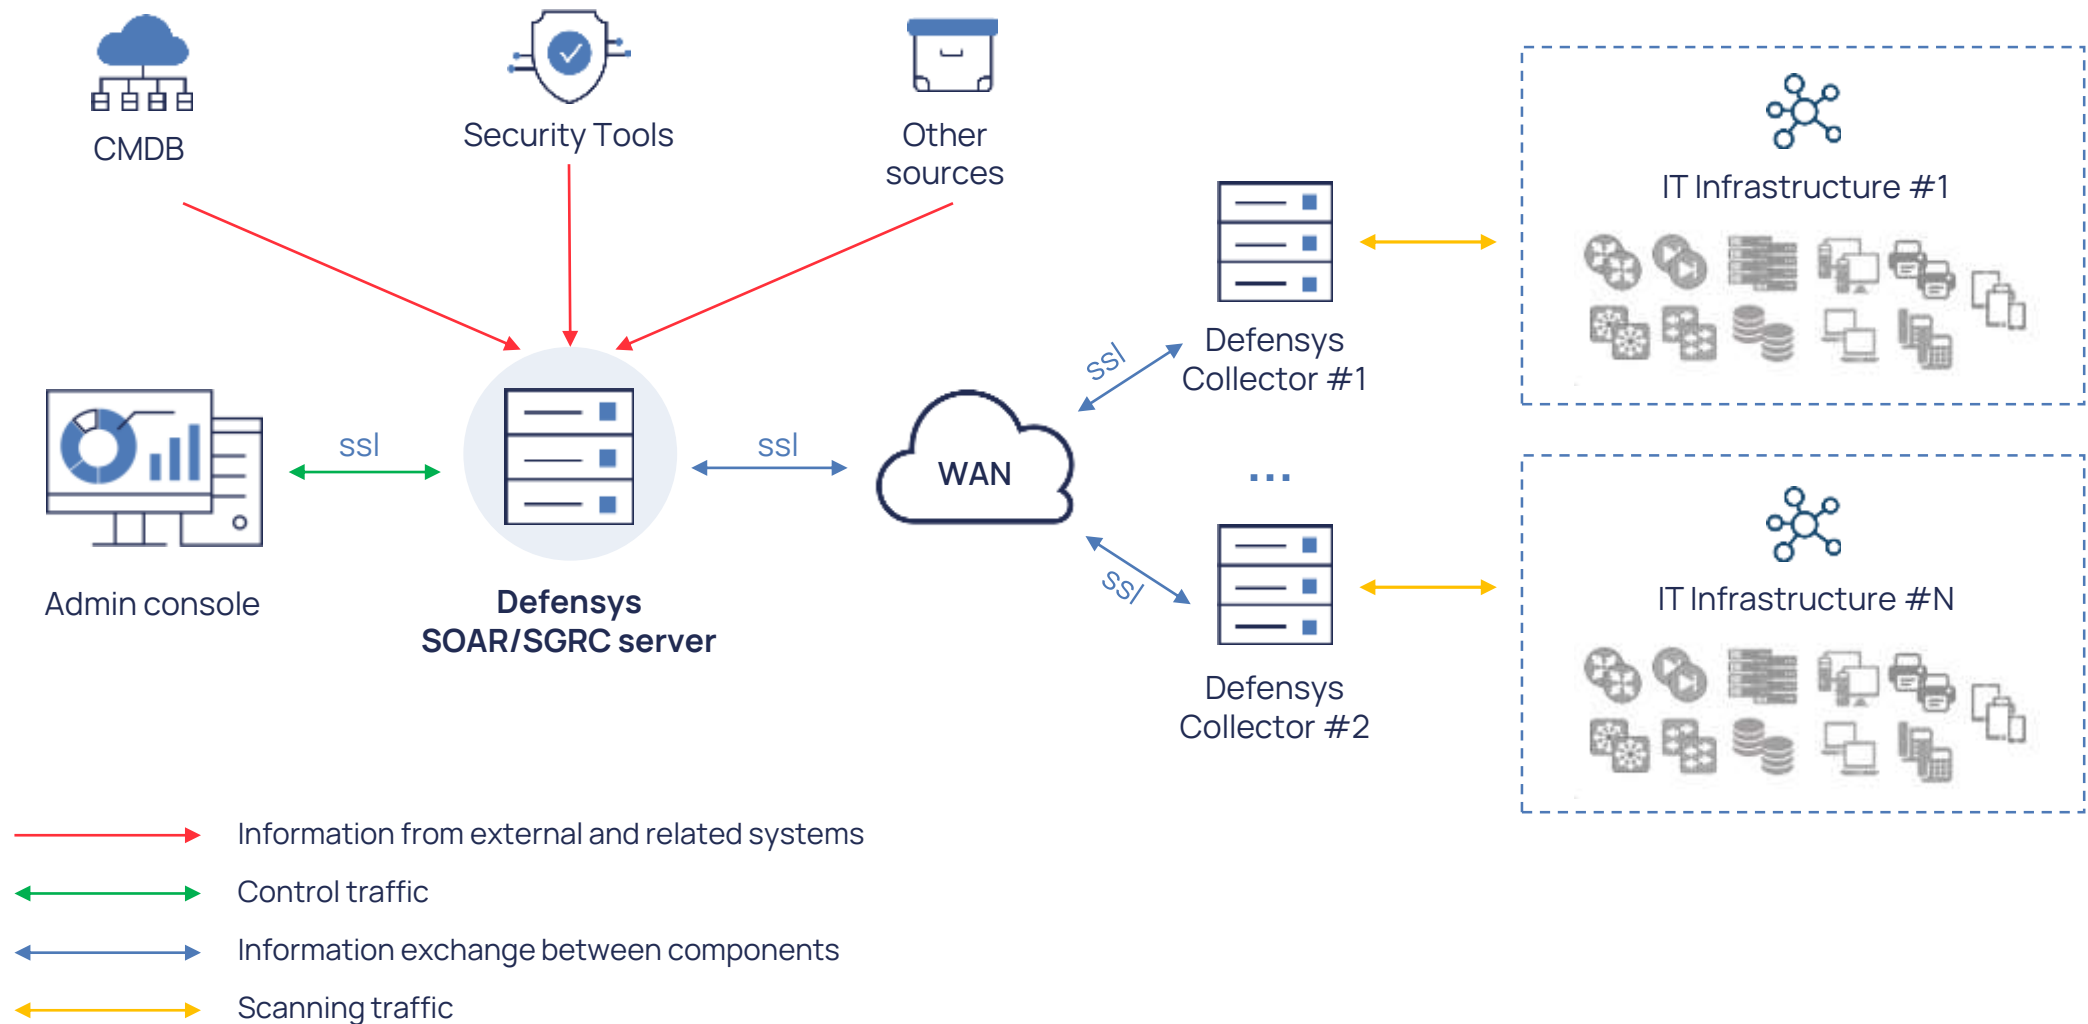

IT Asset Groups

**+ ability to add
your own
custom types**

The product stack

SOAR\SGRC solution architecture for asset management
